About the Museum

A visual guide for families with children on the autistic spectrum
The Museum of Natural History is proud of its family friendly status but recognises that visiting with children on the autistic spectrum can be challenging.

This guide is designed to help you feel more confident before your visit by providing a visual introduction to the museum and by highlighting some of its more sensory aspects. Once you have read this guide, we recommend using the Planning Your Visit guide as a tool to plan your route around the museum and to prepare your child for the visit.

The pictures in both guides will help give you a sense of the different spaces and displays in the museum, as well as the general feel. We have focused on objects and areas that are unlikely to change, but be aware that things do move around from time to time so may not look exactly the same as they do in the pictures or from one visit to the next.

Essential information

- The museum is FREE to visit.
- Feel free to stay for five minutes or five hours, and do come back again.
- The Museum does not have a designated quiet space, but staff at the Welcome Desk will be happy to direct you to a quieter area if one is available. If a quiet space will help make your visit successful from the start, please ring in advance to discuss possible options.
- Do bring and use any support aides that will help your child to feel more comfortable in the building.
- Museums are traditionally seen as places where people should be quiet, but we’re not worried about a bit of noise, so you don’t need to be either.
- Bring the whole family; there are always trails available to keep siblings occupied, and children can collect a museum sticker from the Welcome Desk.

- HAVE FUN!

For further information or advice regarding visiting, please contact the Family Education Officer: Telephone 01865 282537 Email education@oum.ox.ac.uk
PLANNING YOUR VISIT

General Information

Opening Times
- The museum is open seven days a week, 10am–5pm. Please check the website www.oum.ox.ac.uk or ring 01865 272950 for information about closures at Christmas, New Year’s, and Easter.

Busier and Quieter Times
- The museum tends to be busier at weekends and during the holidays. At these times, we recommend visiting when the museum opens at 10 am.
- During term time, we recommend visiting 2.30–5pm on weekdays.
- Sunday mornings tend to be a bit quieter throughout the year.

Events
- Events for adults and families happen throughout the year.
- The museum can get very noisy and crowded on event days.
- The Museum hosts early openings for visitors on the autistic spectrum. Please check the website for more details. Booking is required.
- Please check the website www.oumnh.ox.ac.uk or ring 01865 272950 for information about days when events are taking place.

Arriving at the Museum

Parking
- There is no public parking at the museum.
- There is disabled parking at the museum. These spaces can be located on the left hand side of the Museum next to the lawn.
- There is pay-and-display parking (2–3 hours) nearby on Parks Road, Museum Road, and Keble Road.
- There are multiple bicycle racks on the left hand side of the Museum.

Walking
- The museum is a 5–10 minute walk from bus stops on St Giles and in the city centre.
- Although there is a shop and café at the museum, the nearest shop, café, or cash machine away from the museum are all a few minutes’ walk.

Traffic
- The museum is set back from a relatively busy road.
- There is parking for university staff on the left hand side of the museum; please be aware of cars pulling in and out.
In the Museum

The Building
- The Museum of Natural History is a Grade 1 listed Victorian building.
- The main part of the museum is effectively one large room with a gallery upstairs.
- Most of the building is stone, iron, and glass, with wooden doors and metal grates throughout, and some carpeted floors.
- Light and temperature levels can vary greatly, both in different spaces and at different times of the day and year. Portable fans may be used to help circulate the air when it is hot.

The Displays
- Wood-and-glass cases are arranged in rows, with viewing at different heights.
- There are large, freestanding models – particularly of dinosaurs – as well as objects on open display and tables and plinths with touchable objects.
- Many cases are brightly-lit and/or contain brightly-coloured displays, which may appear visually ‘busy’; other cases are much plainer. The amount of text in displays also varies.

Facilities
- There is a café upstairs.
- There are toilets, including two disabled toilets, and baby changing facilities located on both the left and right hand side of the Museum, including some located by the accessible entrance.
- There is no cloakroom.

Recording your Visit
- Photography, with or without flash, and filming using tablets, cameras, or phones are allowed for personal use only.
- You are welcome to draw in the museum, but please help us to protect the stone floor by only using pencils.

Eating and Drinking
- The café serves light refreshments. It can be particularly crowded at weekends and during the holidays. Please note that it closes at 4.30pm.
- You are welcome to have a picnic on the lawn or to eat and drink in the porch area, but both of these areas can be noisy and crowded.
- Bottled water, but no other food or drink, can be consumed within the main part of the museum.
Family Activities

- There is a stand at the front of the Museum as you enter with trails and pencils for you to use, but please remember to return the pencils before you leave.
- The trails are also available to download from the museum website if you wish to read over or print them before you arrive: https://oumnh.ox.ac.uk/family-trails-and-crafts

Help us take care of the museum

Although we encourage families to engage with the objects on display, there are certain guidelines that are always good to remember:

- please walk when you are inside the museum: we want both our visitors and our collections to be safe, and running increases the chances of knocks and falls;
- rough handling and oily or sticky fingers can damage our objects: look for signs saying ‘Please Touch’ or ‘Please Don’t Touch’, and if in doubt, don’t touch;
- sometimes you may want to get a better view of something, but please do not lean, sit or climb on the stonework or cases.
The Museum

The Museum of Natural History is a large Victorian building with other buildings on either side. There is a tower in the middle of the roof. In the late spring and summer, you can see and hear swifts (birds) flying in and out of the tower. In front of the museum, there is a paved and gravelled drive, a lawn with a fenced-in sequoia tree, and some smaller gardens along the front of the building and in square planters to one side. Visitors, including large groups, often gather by the main entrance, so it can become crowded.

When You Leave the Museum

When you leave the museum, you will have the paved and gravelled drive and the lawn in front of you. At the far end of the lawn is a wall, and beyond that is the road. Currently there are building works happening on the right hand side of the Museum. The building site is surrounded by hoarding which is decorated with images from the Museum collections. Please note that there may be some construction noises during your visit.

A row of stone dinosaur footprints, which often fill with water when it rains, extends diagonally across the lawn. There is a private staircase leading underground near the roadside wall. You are welcome to sit anywhere on the grass or on the benches.
Accessing the Museum

Building work is currently taking place outside the Museum and we have had to install a hoarding wall. To access the building, walk past the Museum so it is on your right.

Keep to the pedestrian/cycle path with the hoarding wall on your right. You will then approach an opening on the right.

With the hoarding still on your right, turn and walk along the tarmac path towards the Museum’s Main Entrance.

The Museum has no general parking for visitors. If you walk along to a second opening on the right, you will see the 2 disabled parking bays which are offered on a first-come first-served basis.
From the parking spaces, you can follow the tarmac path that will lead you to the Museum’s Main Entrance.

The Main Entrance has stone steps leading up into the Museum. If you need the Accessible Entrance, turn right past the main entrance and follow the metal wall.

Route to Accessible Entrance. Follow the metal wall and gravel path.
Side Doors
There are external doors located at the front of the museum on the opposite side of the accessible entrance. These doors are located by a smaller set of toilets. There is a large button to the left of the glass sliding doors; pushing it will open the doors. Once through the doors, you must re-enter via the main or accessible entrance.

The Accessible Entrance
If you are looking at the front of the building, the accessible entrance is through a side door on the right. You can access this by going to the Main Entrance then immediately turning right down a walkway that follows the building site hoarding, which leads you to a stone archway. The accessible entrance is a wooden door to the left inside the archway. To open the door press the silver button located on the wall to the left hand side of the door. Follow the signage in to the Museum and around the corner to the lift. You may want to ring 01865 272950 before setting out to confirm that the lift is working.
The Porch
This space is between the front entrance and the main museum. It is dimly lit and can be draughty. If lots of people are trying to come in or out at once, it can be noisy and crowded. Sometimes the doors at the top of the stairs are open; sometimes they are closed. If you have to open them, be aware that they can feel heavy or stiff.

When You Enter the Museum
In front of you, you will see some columns and a whale jawbone, and, beyond them, the main part of the museum. The main part of the Museum is known as the Court. It is a large open space separated into narrower aisles by rows of cases. Above the Court is a high glass roof. Sometimes there are multi-coloured lights shining up the columns. The outer aisles, including the one you will be standing in as you enter, form a square around the Court. The outer aisles are darker and feel more enclosed than the aisles in the Court. The flooring varies throughout. There may be a member of staff from the Visitor Services team standing by the door to welcome you and tell you about what you might see during your visit. They will be wearing a blue fleece and may or may not be wearing a facemask.
The Welcome Desk
If you have any questions or problems, please ask the person at the Welcome Desk. Different people work at the Welcome Desk on different days and throughout the day, and sometimes there doesn’t seem to be anyone there at all, but don’t worry: someone will be there soon!

Donation Point
By the whale jawbone, as you enter the Museum, there is a screen on a plinth. This is for anyone who would like to donate money to the Museum to do so by debit or credit card. The screen has no other functions. Donation boxes which accept coins or notes can be located near the donation point.
Family Trails

Family trails are available at the Welcome Desk. You can pick any of these up and use the trail to find objects in the Museum. There are also pencils available. There is a range of topics for a range of ages. There is a sign next to each trail with guidance on age and which floors of the museum are covered in each trail. Some of the signs also feature a QR code if you prefer to access the trails on your own device.

Drawers

At the front of the museum there are a set of drawers that you can pull out. Inside are natural history specimens. Some of these are covered with a plastic casing but others are open and you are welcome to touch the specimens inside. The specimens are the real thing so they are body parts or animals that were once alive but are no longer. There are a range of textures in the drawers.
Specimens in the Museum
Most of the objects in the museum are not models; they are the real thing! Like in any other natural history museum, there are lots of skeletons and skins that have come from dead animals. There are also lots of minerals and fossils. Some specimens are on open display. Others are in wood and glass cases.

Models in the Museum
Some of the objects in the museum are models. They help us to see things that we might not otherwise see because they are too small or rare or fragile.
Chairs

There are chairs between the cases in various parts of the museum. Feel free to sit down if you need a rest. If you move chairs together, please return them to their original positions.

The Pitt Rivers Museum

At the back of the Museum of Natural History, there is another, very different museum called the Pitt Rivers Museum. It has objects made and used by people from around the world spread across three floors. There is very little natural light and the cases are much more crowded in the Pitt Rivers Museum. It opens later (12 noon) than the Museum of Natural History on Mondays and closes earlier (4.30 pm) every day. At these times, the doors are kept shut.

During the Autism Friendly Opening, you are welcome to visit the Pitt Rivers Museum too.
Toilets
The male, female, and unisex accessible toilets are all downstairs. They can be located on both front corners of the building. They can be accessed by lift, or by the stairs located at the end of the Museum’s shop. The toilets near the Accessible Entrance/Museum shop are in a larger space and have more toilets. There are baby changing facilities in these toilets.
Please note that there are automated hand driers in the toilets which make a loud noise when you put your hands underneath. There are side doors leading out of the museum near all of the toilets. The lift is located by the larger set of toilets.

The toilets near the side doors are in a much smaller space and a separate accessible toilet can be found next to them which has baby changing facilities.
The Mineral Tent
Step inside this small, dark tent, and see some colourful, glowing rocks. If you are wearing or carrying something white, it will also glow because of the invisible fluorescent light inside the tent. This space is popular and can become crowded. Please note that the curtains have been removed due to Covid-19 transmission risks.

The Shop
The Museum shop is immediately on the right if you come through the main entrance. It has a range of products from postcards and pocket-money souvenirs to more expensive gifts and books. Because of its location and layout, the shop can become crowded when there are lots of people or large groups in the museum.
The Lift
The lift calls at three floors: the lower ground floor by the Accessible Entrance, the ground floor, and the first floor. When you leave the lift at the ground floor, you will be in the front corner of the museum, near the shop. When you leave it at the first floor, you will be in a small room with a television screen, constant sound, and an enclosed bee hive. If the main lift isn’t working, there is a wheelchair lift on the other side of the museum so you can still access the Court. Please ask for help at the Welcome Desk.

Stairs
There are two main sets of stairs: one in each of the front corners of the building. The stairs are stone and curve around. When you come through the main entrance, the stairs on the right are initially a bit darker and you have to walk past or through the shop to get to them. The stairs on the left are lighter but can be busy in the mornings during university term time, when students use them to access the lecture theatre upstairs. Both sets of stairs have large windows halfway up. The stairs down to the lower ground lead to the toilets.
The Upper Galleries
Like the outer aisles downstairs, the gallery aisles upstairs are darker and feel more enclosed than the aisles in the Court. From the galleries, you can look out and up and see many architectural details. You can also look down and see the Court below.

The Café
The café is upstairs and can be reached via both staircases and the lift. There are lots of tables and chairs, and some highchairs. It is difficult to predict how full the café will be, but it is likely to be busier in the holidays and on Saturdays. The refrigerated shelves make a constant buzzing sound.
The Exhibition space

On the Upper Gallery there is also an exhibition space. The current exhibition is called Wasteland which features the aerial photography of American artist and climate activist, J Henry Fair. Featuring groundbreaking images of industrial waste, Waste Land exposes the environmental damage caused by mining, manufacturing, agriculture, and energy generation.

Live Specimens

Upstairs, there are four cases that usually have live animals from the Entomology department in them. The animals you might see include cockroaches and stick insects. We ask visitors not to tap on the glass as tapping can disturb the animals.
**Touchable Objects**

Visitors are invited to touch various objects in the museum. Most are located in the court. Please look for the ‘Please Touch’ signs. There are also drawers that can be pulled out near the family activities trolley. The touchable objects inside the drawers comprise a wide range of textures. There are some specimens that cannot be touched; there may be a barrier around them or a sign stating this. Not all displays will have a sign or barrier so if in doubt do not touch.

**Screens**

There is a television screen to the right of the Welcome Desk. It usually shows short films, but currently has a live cam on swifts nesting in the Museum tower. There are also two touchable interactive screens in the museum, one downstairs featuring a ‘Tree of Life’ interactive, and one upstairs featuring images of insects that you can look at closely by zooming in. These two screens do not make any noise. Sometimes this screens can be a bit tempermental so do report to the Welcome Desk if you notice that it has stopped working.
Redisplay

The Museum has recently completed a redisplay project in the Centre Court. Check out the new displays during your visit. They contain a wide range of specimens and focus on the variety of life, and adaptation/evolution.
